

## EASITEX® - 100mm (Double Sided)

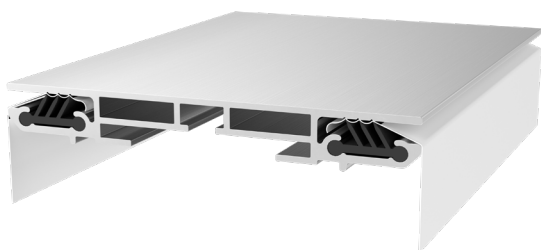

EASITEX is a new and patented innovation within textile signage. There is no need for a silicone strip to be sewn to your prints meaning a product which is more cost effective and environmentally friendly than traditional tension fabric systems.

Our 100mm depth profile is our first double sided profile and is also the deepest profile within the EASITEX range.

EASITEX is extremely simple to assemble with drill-less corner arrangements across the entire range.

EASITEX 100mm's corner assembly comprises of easy-to-use corner angles that simply slot into the profiles and secured in place by tightening the pre-packaged bolts.

EASITEX has an internal "grip-strip" which clamps the fabric firmly into position leaving you with a great and hassle-free finish.

By simply printing slightly larger than your frame and using our specially designed Tension Tool, installation is comfortable, quick and easy.
