

EASITEX® - 25mm (Single Sided)

EASITEX is a new and patented innovation within textile signage. There is no need for a silicone strip to be sewn to your prints meaning a product which is more cost effective and environmentally friendly than traditional tension fabric systems.

Our 25mm depth profile is typically used for non-illuminated applications and is the most shallow profile within the EASITEX range.

EASITEX is extremely simple to assemble with drill-less corner arrangements across the entire range.

EASITEX 25mm's corner assembly comprises of easy-to-use corner keys that simply slot into the profiles and secured in place by tightening the pre-packaged screws.

EASITEX has an internal "grip-strip" which clamps the fabric firmly into position leaving you with a great and hassle-free finish.

By simply printing slightly larger than your frame and using our specially designed Tension Tool, installation is comfortable, quick and easy.
