# EASITEX®|E

A new movement in textile signage
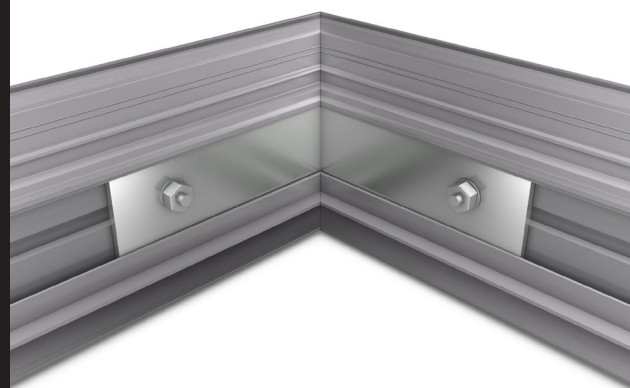

EASITEX® - 80mm (Single Sided)

EASITEX is a new and patented innovation within textile signage. There is no need for a silicone strip to be sewn to your prints meaning a product which is more cost effective and environmentally friendly than traditional tension fabric systems.

Our 80mm depth profile is typically used for illuminated applications but can also be used for non-illuminated applications too.

EASITEX is extremely simple to assemble with drill-less corner arrangements across the entire range.

EASITEX 80mm's corner assembly comprises of easy-to-use corner angles that simply slot into the profiles and secured in place by tightening the pre-packaged bolts.

EASITEX has an internal "grip-strip" which clamps the fabric firmly into position leaving you with a great and hassle-free finish.

By simply printing slightly larger than your frame and using our specially designed Tension Tool, installation is comfortable, quick and easy.
