A new movement in textile signage

EASITEX® - Textile Signage... Reinvented

Fabric signage, soft signage, textile signage, whatever you refer to it as, the market is ever growing and EASITEX REINVENTS it.

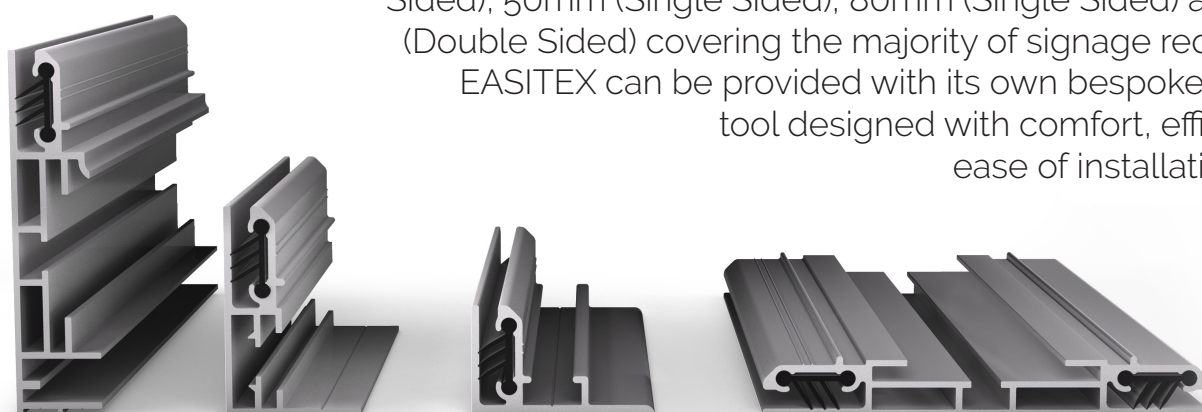

It is seamless in nature as there's no need for a silicone strip or any fabrication to your print - textile signage has just got easier.

EASITEX has an internal "grip-strip" which clamps the fabric firmly into position leaving you with a great and hassle-free finish. This simple change means a product that is more cost-effective & environmentally-friendly compared to traditional tension fabric systems. The prints are often supplied with quicker turnarounds and are also more reliable once on-site due to its seamless nature.

The EASITEX range currently offers 4 different depths: 25mm (Single Sided), 50mm (Single Sided), 80mm (Single Sided) and 100mm (Double Sided) covering the majority of signage requirements.

EASITEX can be provided with its own bespoke tensioning tool designed with comfort, efficiency and ease of installation in mind.
